

BPG15 Port-a-guard Escalator

Port-a-guard Escalator is designed for closing off escalators and elevators during servicing or breakdowns. To operate, simply secure suction cups to one side of the opening and expands until suction cups contact the opposite side of the opening. Press into place. Gas struts maintain pressure on suction cups ensuring the unit stays in place.

To remove, break the seal on the suction cups and close unit to remove. Weight 5kg. Closed 330mm. Open 2000mm.

PART No.	DESCRIPTION

SECTION 6.4

PORT-A-GUARD SPARE PARTS

BPG16 Replacement Feet

Replacement plastic foot moulded from durable ABS plastic, suits all Port-a-guard models. Sold individually and available in black only.

The Port-a-guard replacement foot is held in place by a single screw. Simply remove damaged foot and fit new foot using a Phillips head screwdriver. Holes to receive optional locking castors are moulded in. For more details on castors see Section 6.5.

PART No.	DESCRIPTION
BPG16-B	Replacement foot – Black ABS plastic replacement foot

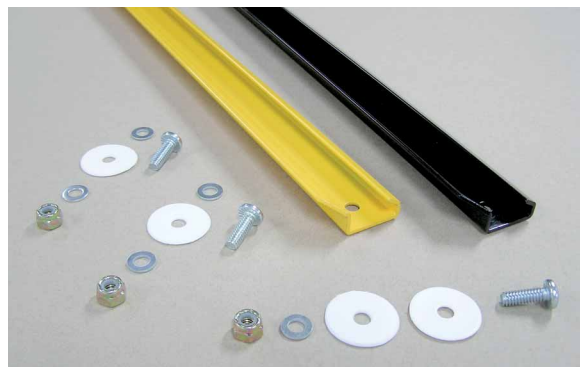

BPG16B.

BPG17 Replacement Slats

Replacement extruded aluminium slat kits for the replacement of damaged slats or to extend the opening width of existing Port-a-guards. Each kit contains 2 slats (1 each colour) and the necessary fixings. Available in Black/Yellow or Red/White.

Note: 1 pair of slats equates to an additional 600mm max. opening width.

PART No.	DESCRIPTION
BPG17-BY	1 pair replacement slats – Black/Yellow
BPG17-RW	1 pair replacement slats – Red/White

BPG17BY shown.

SECTION 6.5

PORT-A-GUARD ACCESSORIES

Free Standing Posts

A freestanding post for installation of fixed Port-a-guards where there is not a wall or structure to mount off. Simply mount your Port-a-guard to the brackets built-in to the post and fix into the ground. Steel construction with either a red or yellow powder coated finish. If mounting into a new concrete footing use with BGK3 in-ground kit (see right).

PART No.	DESCRIPTION
BPG13SM-R	Port-a-guard free standing post 3.7kgs – Red
BPG13SM-Y	Port-a-guard free standing post 3.7kgs – Yellow

Base Weights

Our optional base weight add approximately 2.45kgs per weight. Ideal if required for use in high wind areas.

Weights are sold as single units and come complete with fixings. They are simple to attach to the existing plastic Port-a-guard foot using only a hex key. Zinc plated finish.

Fixings are provided with each weight purchased.

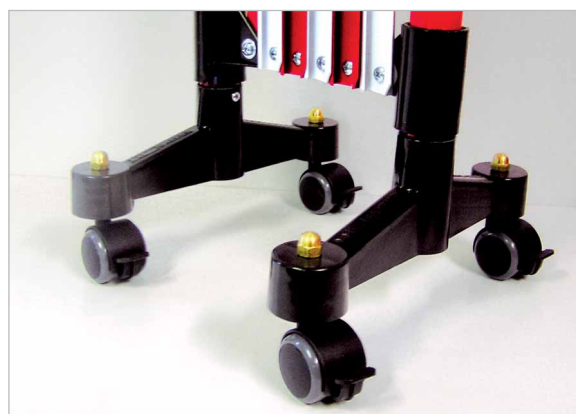

PART No.	DESCRIPTION
BPG12	Base weight – 2.45kgs (each)

Locking Castors

Port-a-guard castors quickly and cost effectively convert your new or existing Port-a-guard, making it much easier to move about.

No special tools or modifications necessary, simply screw the castors into the base of the plastic foot.

The built-in locking feature improves the stability of Port-a-guards while in service.

PART No.	DESCRIPTION
BPG88	Locking castor (each)

Wall Receiver Bracket

The wall receiver bracket allows your Port-a-guard to be locked in position to temporarily close off an area or restrict access, or to alternatively prevent your Port-a-guard from unauthorised removal.

Simply attach the bracket to any wall or structure, and secure the Port-a-guard using the post wing. Suitable for use with any standard padlock (sold separately). Attractive gold zinc plated finish, manufactured from 3mm mild steel.

PART No.	DESCRIPTION
BPG-WR	Port-a-guard wall receiver (each)

Additional Wall mount Bracket

Purchasing an extra set of Port-a-guard wall mount brackets allows you to convert a standard freestanding Port-a-guard to a wall mount version. Alternatively, you may wish to use your existing wall mount model in more than one location.

Constructed from heavy 6mm plate and thick wall tube with a gold zinc plated finish. The set comprises two parts. The lower receiver post accepts the Port-a-guard while the upper locking bracket prevents the unauthorised removal of your Port-a-guard once installed.

See Section 6.3 for installation procedure.
