Braided Ropes

Choose from Black, Blue or Red high quality braided ropes with machined stainless steel end ferrules. Our standard ropes 2.1 metres long to suit 2 metre post centres. Custom ropes can be made in any length up to 3 metres.

Chain Types

Plastic or stainless steel chains are used with hook posts, when ropes are not ideal. The economical 25 metre rolls of 6mm plastic chain are available in four standard colours, while the 6mm stainless steel chain is sold loose by the metre.
Hook Posts
Removable In-Floor

Neata hook posts are available in two grades of stainless steel or durable UPVC plastic. All posts are 63mm in diameter. Removable in-floor posts are a pin and socket design that allow the posts to be quickly deployed or removed without tools leaving a clear floor. Hook posts are a 4-way configuration and accept our plastic or stainless steel chain or braided ropes on page 91.

**Note:** Stainless steel in-floor sockets sold separately.

Hook Posts
Fixed In-Floor

Neata hook posts are available in two grades of stainless steel or durable UPVC plastic. All posts are 63mm in diameter. Fixed in-floor installation using the aluminium slip post kit allows them to rotate for alignment while a security fixing prevents unauthorised removal. Hook posts are a 4-way configuration and accept our plastic or stainless steel chain or braided ropes on page 91. **Note:** Slip post kits sold separately.

NFSP-A
See page 89 for installation
Post Installation
Removable In-Floor

Removable in-floor post installation is completed by installing machined stainless steel in-floor sockets (P/N: NIFS-SS) into the floor. This requires drilling 22mm holes to a depth of 75mm and gluing the sockets into the holes using a suitable epoxy adhesive. This method is recommended for both tiled and concrete floors.

Step One
Set out and mark holes.

Step Two
Drill 22mm diameter holes 75mm deep.

Step Three
Epoxy sockets into cleaned holes. We use and recommend Hilti brand HIT-RE 500 Epoxy Mortar.

Step Four
Ensure the sockets are flush with the floor and allow epoxy to cure before inserting posts.

Post Installation
Fixed In-Floor

Fixed in-floor installation is simple and economical using the M12 stainless steel drop-in anchors supplied with the slip post kits (P/N: NFSP-A). Tools required are a 15mm masonry drill, setting tool for an M12 drop-in anchor (P/N: N1304-ST), a spanner to tighten the slip post and a Phillips screw driver to install the security fixing. When complete, the posts are free to rotate but unable to be removed without tools.

Step One
Set out and mark holes. Drill 15mm diameter holes 50mm deep.

Step Two
Install and set M12 drop-in anchors into cleaned holes.

Step Three
Install and tighten slip posts.

Step Four
Fit posts and install security fixings.
